Our turtles.

They choose Aruba's beaches as a safe haven;

They choose Aruba's beaches as their breeding ground;

They connect and communicate through vocalizations and body language.

Their slow and steady pace represents resilience and endurance.

\* The monetary survey consolidates the accounts of the Centrale Bank van Aruba, the commercial banks and the Government related only to the issuance of components of the money supply, i.e., coins and treasury bills. This survey shows the financial relationship between the monetary sector, whose liabilities include the money supply, and other sectors of the economy.

\*\* Gross claims include loans granted as well as government bonds in the hands of the monetary sectors and claims resulting from the issuance of treasury bills, cash certificates, and coins.

\*\*\* Revaluation differences of gold and official foreign exchange holdings are excluded in order to approximate the net import of foreign funds by the nonmonetary sectors.

1) The Diversification Index measures the concentration within the tourist market, and thus demonstrates the degree of diversification by tourist origin countries. The higher the index, the higher the level of concentration, meaning less diversification. For further reference on the methodology (which is an application of a Herfindahl-Hirschman index) see the Quarterly Bulletin (2011-I) of the CBA.

2) Is compiled from transactions in foreign currency, traveler's checks, and credit cards, as reported by the local foreign exchange banks (it excludes the contribution of tourism credits gathered from notified foreign bank and intercompany accounts).
